

Pupils' Worksheet C3

Monitoring Water Use

Name: _____

Class: _____

Example of a Water Meter

0	7	6	3	1	2	1
---	---	---	---	---	---	---

If you look at the water meter you will see that the final three numbers are written differently to the first ones.

The first four numbers tell you how many thousands of litres of water have been used. In this case its 763 THOUSAND litres of water.

The three numbers at the end tell you how many litres to add after the thousands.

So the reading on the meter is 763,121 litres.

Record the school water meter reading at the same time every day for a week. At the end of the week compile a table using Excel, to show how many litres have been used.
